1 October 2024: Control Structures and Loops | Error Handling

# Control Structures and Loops | Error Handling

## Loops:

- for loops iterate over sequences.
- while loops repeat until a condition is false

## Boolean Data Types & Logical Operators:

- Values True or False used in conditional statements and loops.
- Logical operators (and, or, not) combine or modify boolean values.

## Error Handling:

- Prevents program crashes.
- Common errors include ZeroDivisionError, ValueError, TypeError.

# Thank you
